

Un sistema microarchitettonico, modulare e continuamente riconfigurabile, studiato per definire e organizzare gli spazi.

Il risultato è una struttura flessibile e personalizzabile in relazione alla disposizione degli ambienti e alle necessità di utilizzo: una soluzione semplice e funzionale che può caratterizzare molteplici progetti di interior, dai luoghi di lavoro a quelli della casa, fino ad ambienti educational.

Design:

**Zanon Architetti Associati,  
Centro Progetti Tecno  
2018**

**A modular, continually reconfigurable micro-architectural system, designed to define and organise spaces.**

**The result is a flexible structure that can be customised to suit the layout of spaces and specific usage needs: a simple and functional solution that can characterise countless interior design projects, from places of work and rooms in the home to educational spaces.**

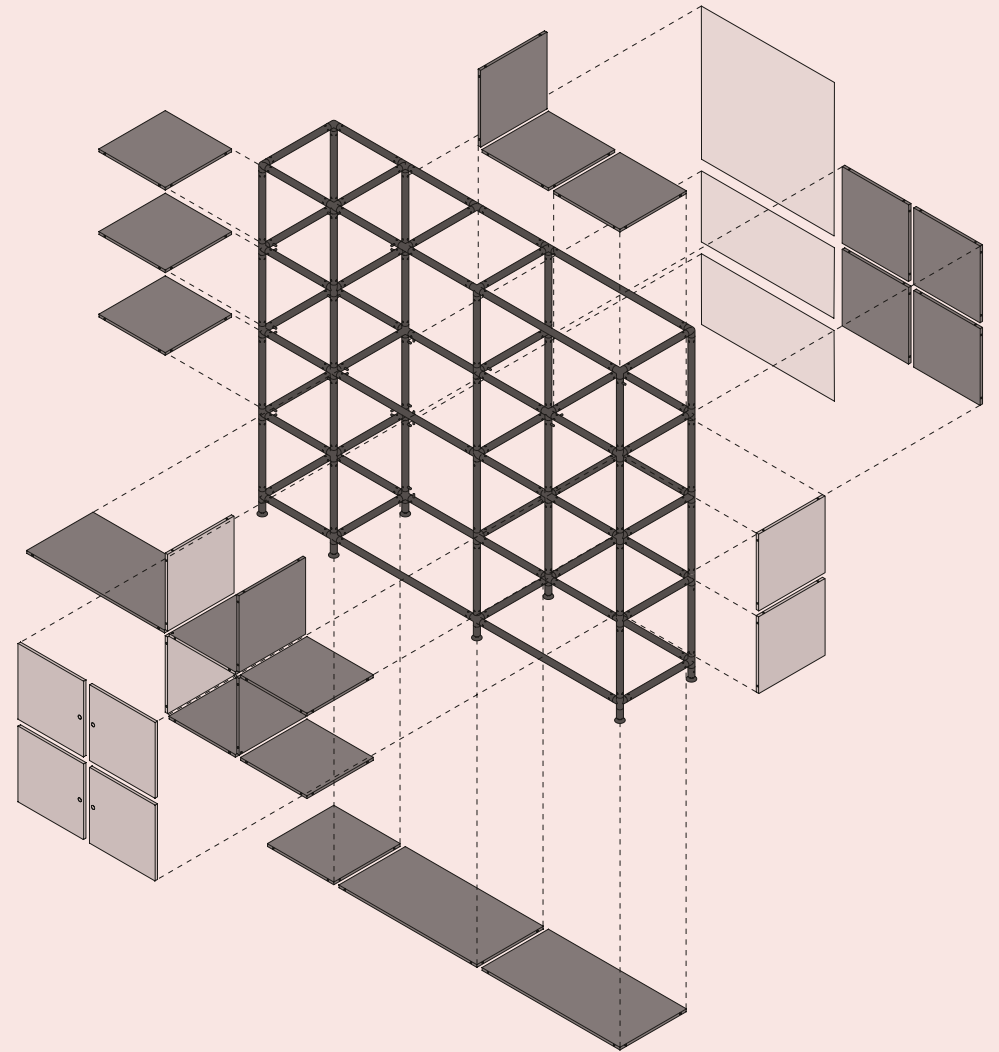

---

Gli elementi costruttivi (snodo, tubolari, pannelli), forme minime quasi archetipiche, si combinano per rispondere a diverse funzioni, creando superfici orizzontali come piani d'appoggio e sedute, piani verticali per ripartire lo spazio, forme che diventano contenitori o supporti integrabili con sistemi d'illuminazione, tessuti e pannelli acustici.

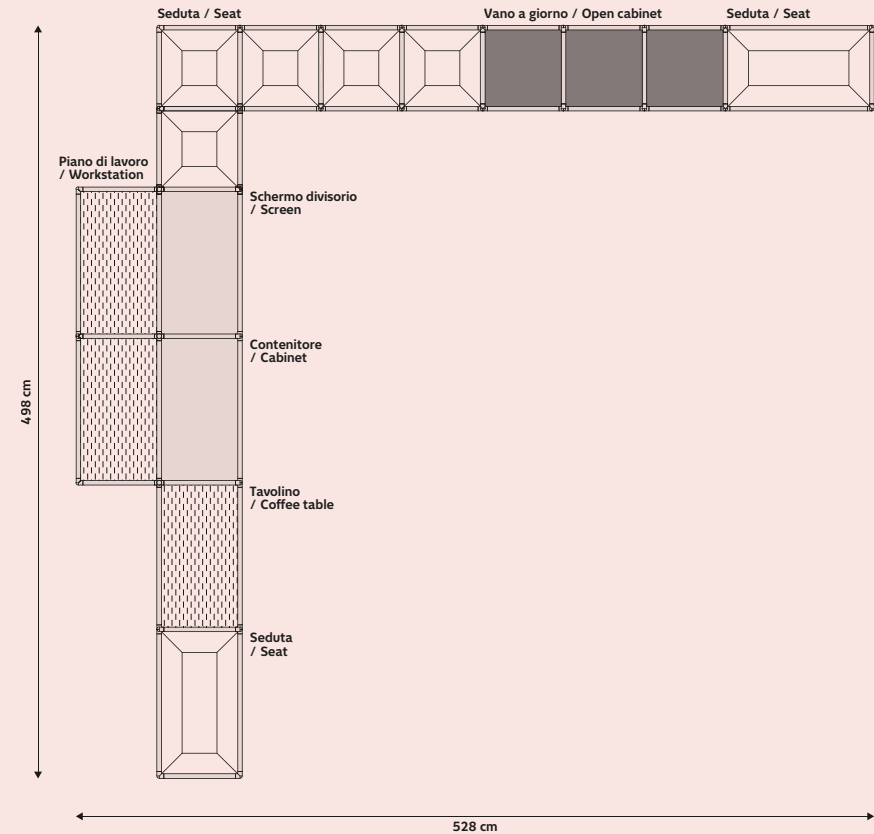

---

**The construction elements (ball joint, tubular sections, panels) and minimalist, almost archetypal shapes, combine to serve various functions, creating horizontal surfaces such as worktops and seats, vertical surfaces to divide up space, shapes that become containers and supports that can be integrated with lighting systems, fabrics and acoustic panels.**

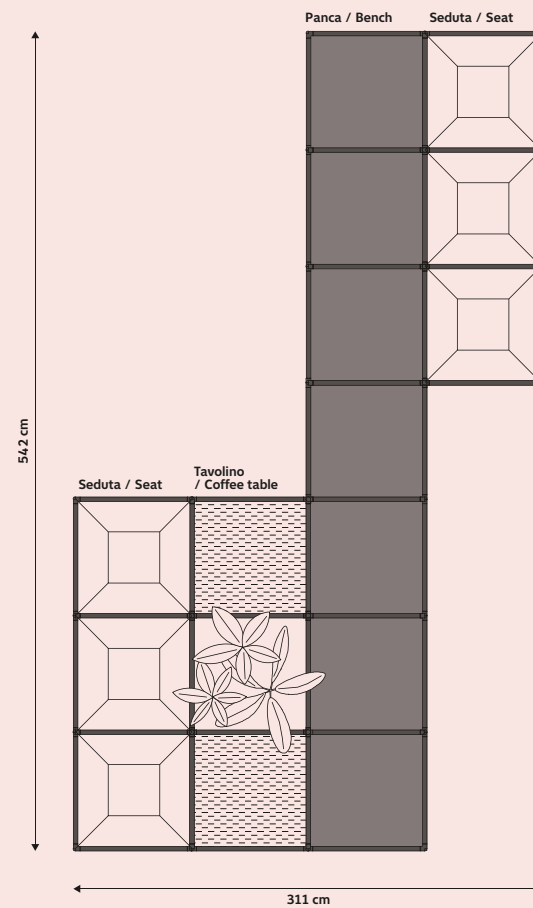

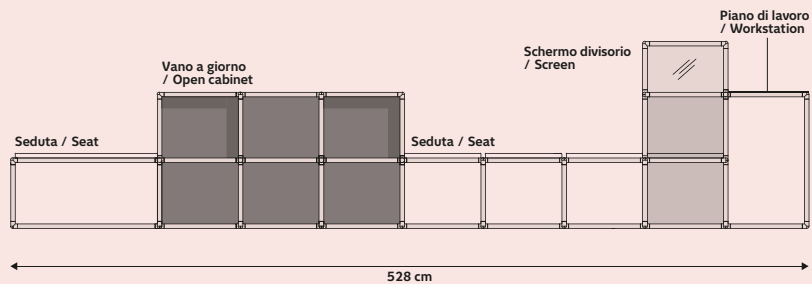

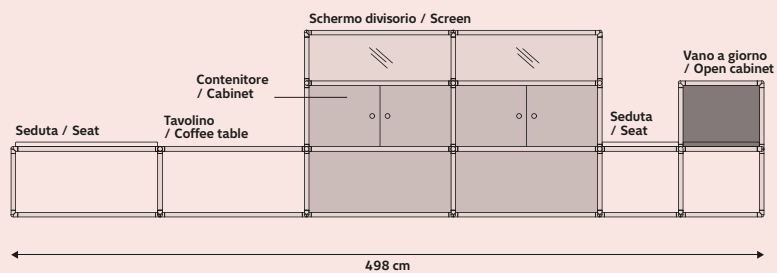

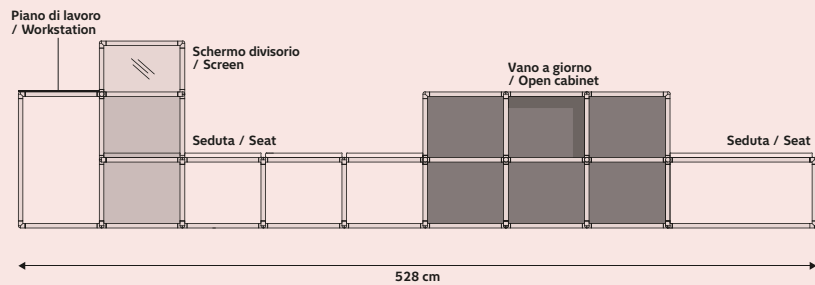

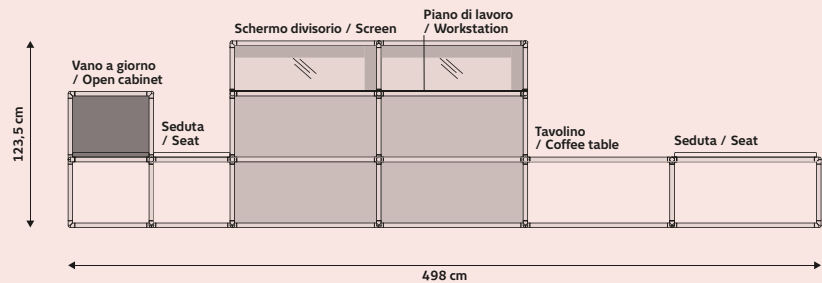

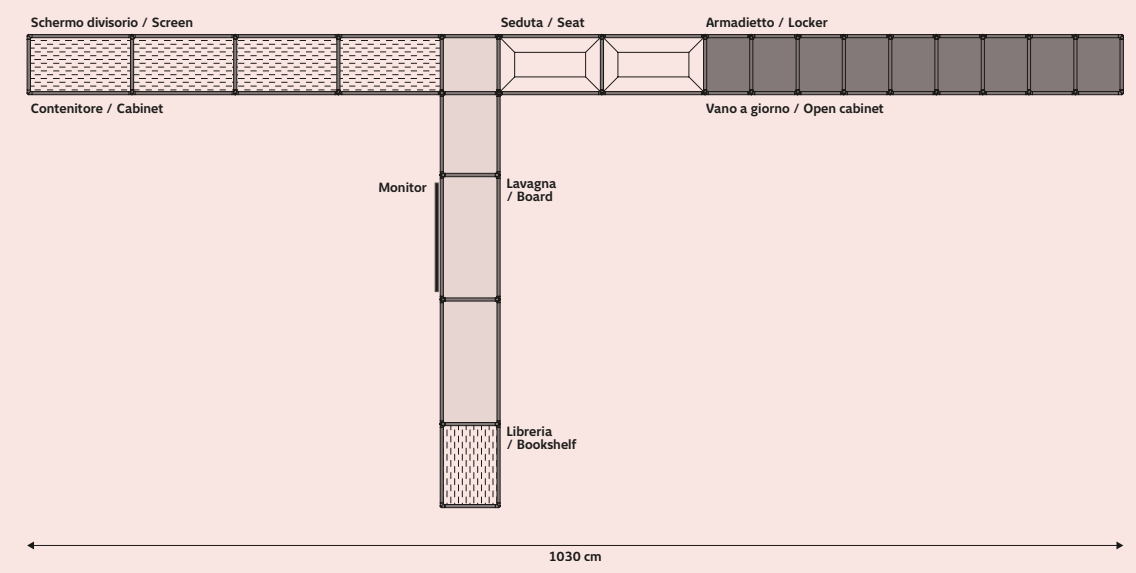

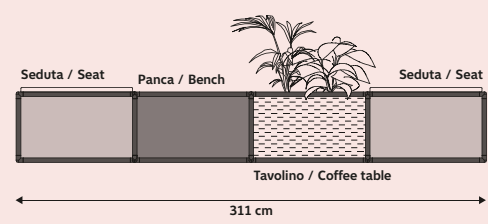

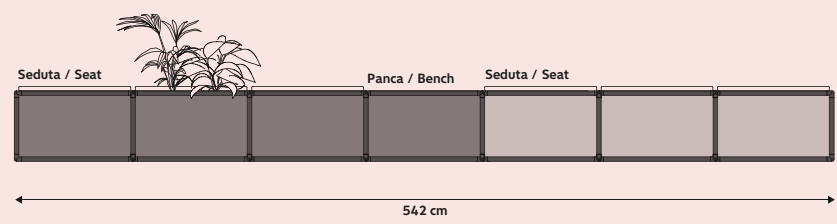

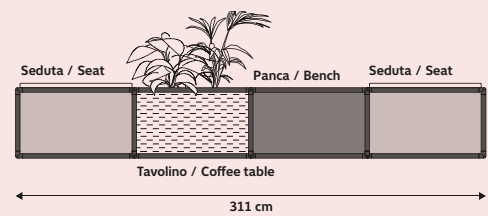

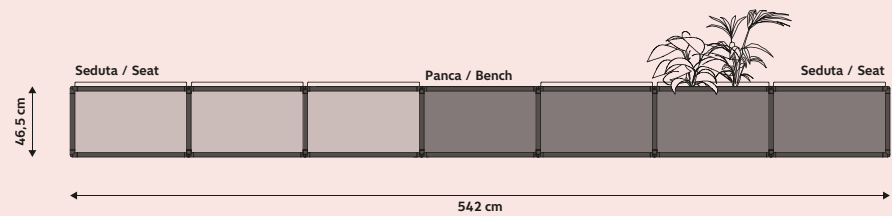

Linea permette di accogliere la più grande varietà di materiali e finiture. Le strutture si integrano con accessori come ante, cassetti, ripiani, lavagne e sedute, e possono accogliere la tecnologia **io.T**.

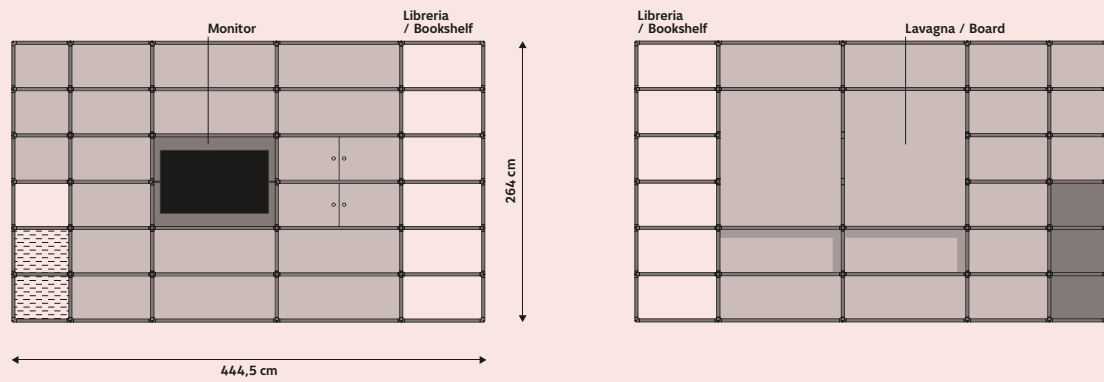

Linea can integrate a wide range of finishes and materials. The structures can be integrated with accessories including cupboards, drawers, shelves, blackboards and seats, and can be equipped with **io.T** technology.
