

Public seating

Public seating

Tecno has worked in many high traffic areas around the world, giving precision to urban interchange spaces, which are increasingly common, whether large waiting halls in railway stations and airports or tram routes and underground lines. Today Tecno develops product systems which stand out for their aesthetics and technical features, in response to social change and new behaviours in mobility.

Tecno si è confrontata con molteplici aree ad alto traffico in tutto il mondo, dando esattezza agli spazi pubblici urbani di interscambio, sempre più diffusi: che siano le grandi hall di attesa di stazioni e aeroporti o i percorsi delle linee metropolitane e tranviarie.

Oggi sviluppa sistemi prodotto distintivi sia sotto il profilo estetico che per caratteristiche tecniche, intercettando i cambiamenti sociali e i nuovi comportamenti connessi al movimento.

Airports and railway stations Aeroporti e stazioni

Airports and railway stations are by now more than simple points of transit, but also multicultural urban areas, transverse and dynamic, in which people spend their time, not simply waiting to move on to the next destination, but in different activities, including work. In such high traffic areas, furnishings must be comfortable and flexible, adapted to a wide range of users, able to answer a variety of needs and equipped with technological features for connected passengers.

Aeroporti e stazioni non sono più solo luoghi di transito ma ambienti urbani multiculturali, trasversali e dinamici in cui le persone passano il tempo, non solo in attesa ma svolgendo diverse attività e spesso lavorando. In queste aree così frequentate, agli arredi è richiesto di essere confortevoli e flessibili, adatti a diversi tipi di utenti, in grado di rispondere a molteplici esigenze e dotati di supporto tecnologico per il viaggiatore sempre connesso.

Aeris

Design:
Grimshaw
2017

Aeris is a seating system that allows alignment of up to 5 seats with the option of adding cantilever tables. The iconic star shape of the structural beam in extruded aluminium is the functional core of the system as well as an aesthetic element that characterises it. The ease of assembly the individual elements gives freedom in composing each segment of the bench, generating endless solutions that can be reconfigured as required. Simply removing the side cover and inserting the joint or connection module makes it possible to connect an unlimited number of benches to satisfy a wide range of layout requirements. The product has been designed to provide a high degree of customisation for truly bespoke projects.

Un programma di sedute su barra che permette di allineare fino a 5 sedute, con la possibilità di aggiungere tavolini cantilever. L'iconica forma a stella della barra strutturale in estruso di alluminio, oltre che elemento estetico caratterizzante, è il cuore funzionale del sistema. La facilità di fissaggio dei singoli elementi permette di comporre liberamente ogni segmento della panca, creando infinite composizioni riconfigurabili nel tempo. Attraverso la semplice rimozione della cover laterale e l'inserimento del giunto o del modulo di connessione, è possibile collegare un numero infinito di panche per soddisfare ogni esigenza di layout. Il prodotto è pensato per accogliere un alto grado di personalizzazione, da realizzare a progetto.

Aeris

Mohammed V Airport, Casablanca (Morocco), 2019

The one-piece structure of the polyurethane seat makes the entire composition dynamic and streamlined: the ergonomic design features a double-S profile for lumbar support, while the rounded profile of the front of the seat allows unimpeded circulation in the legs. The design of the seat means it retains the body's natural posture even for long waiting times.

Il disegno monoscocca della seduta in poliuretano integrale dona slancio e dinamicità all'intera composizione: lo studio ergonomico ha portato alla definizione di una sagoma a doppia S che fa da sostegno alla colonna vertebrale, mentre la smussatura frontale del sedile consente la corretta circolazione sanguigna alle gambe. Così progettata, la seduta permette di mantenere la naturale postura del corpo anche nelle situazioni di attesa prolungata.

The legs and armrests have been designed to provide the highest degree of strength and solidity, while transmitting an impression of outstanding lightness. The armrests are available at two different heights to offer comfort for all users.

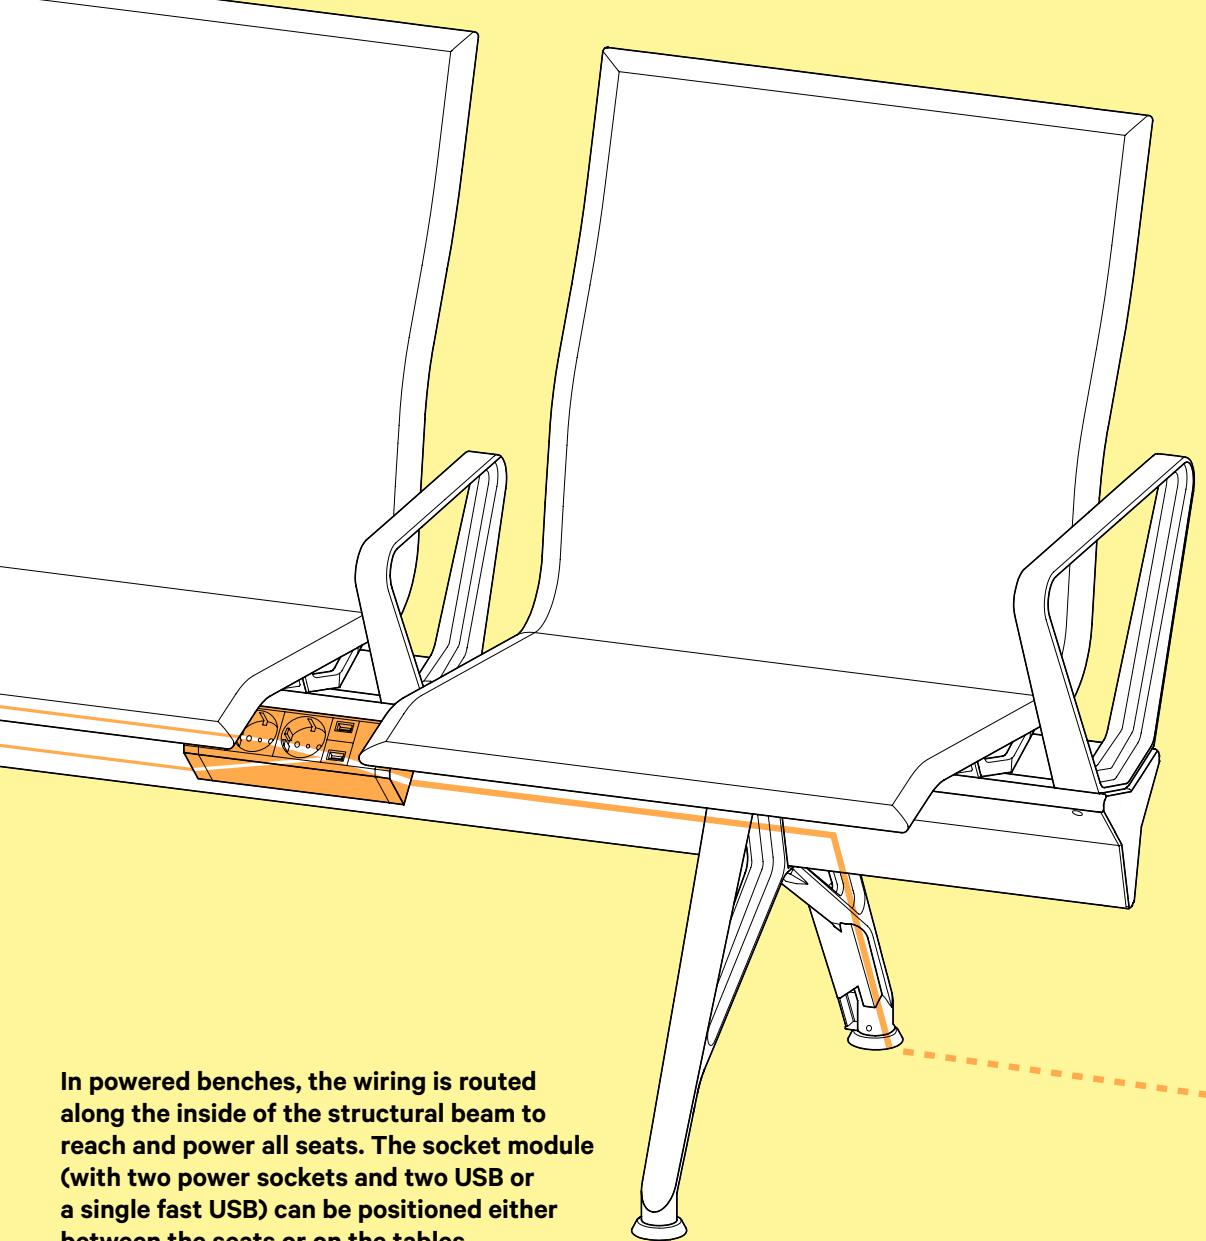

The seat is available in polyurethane integral skin, perforated metal, wood and upholstered in fabric and leather.

Gambe e braccioli sono studiati per assicurare il più alto grado di resistenza e solidità e trasmettere al contempo un effetto di massima leggerezza. I braccioli sono disponibili in due altezze per garantire livelli di comfort diversificato. La seduta è prevista nelle versioni in poliuretano integrale, lamiera forata, legno oppure rivestita in tessuto, pelle e cuoio.

Esploso dei componenti del sistema Aeris.

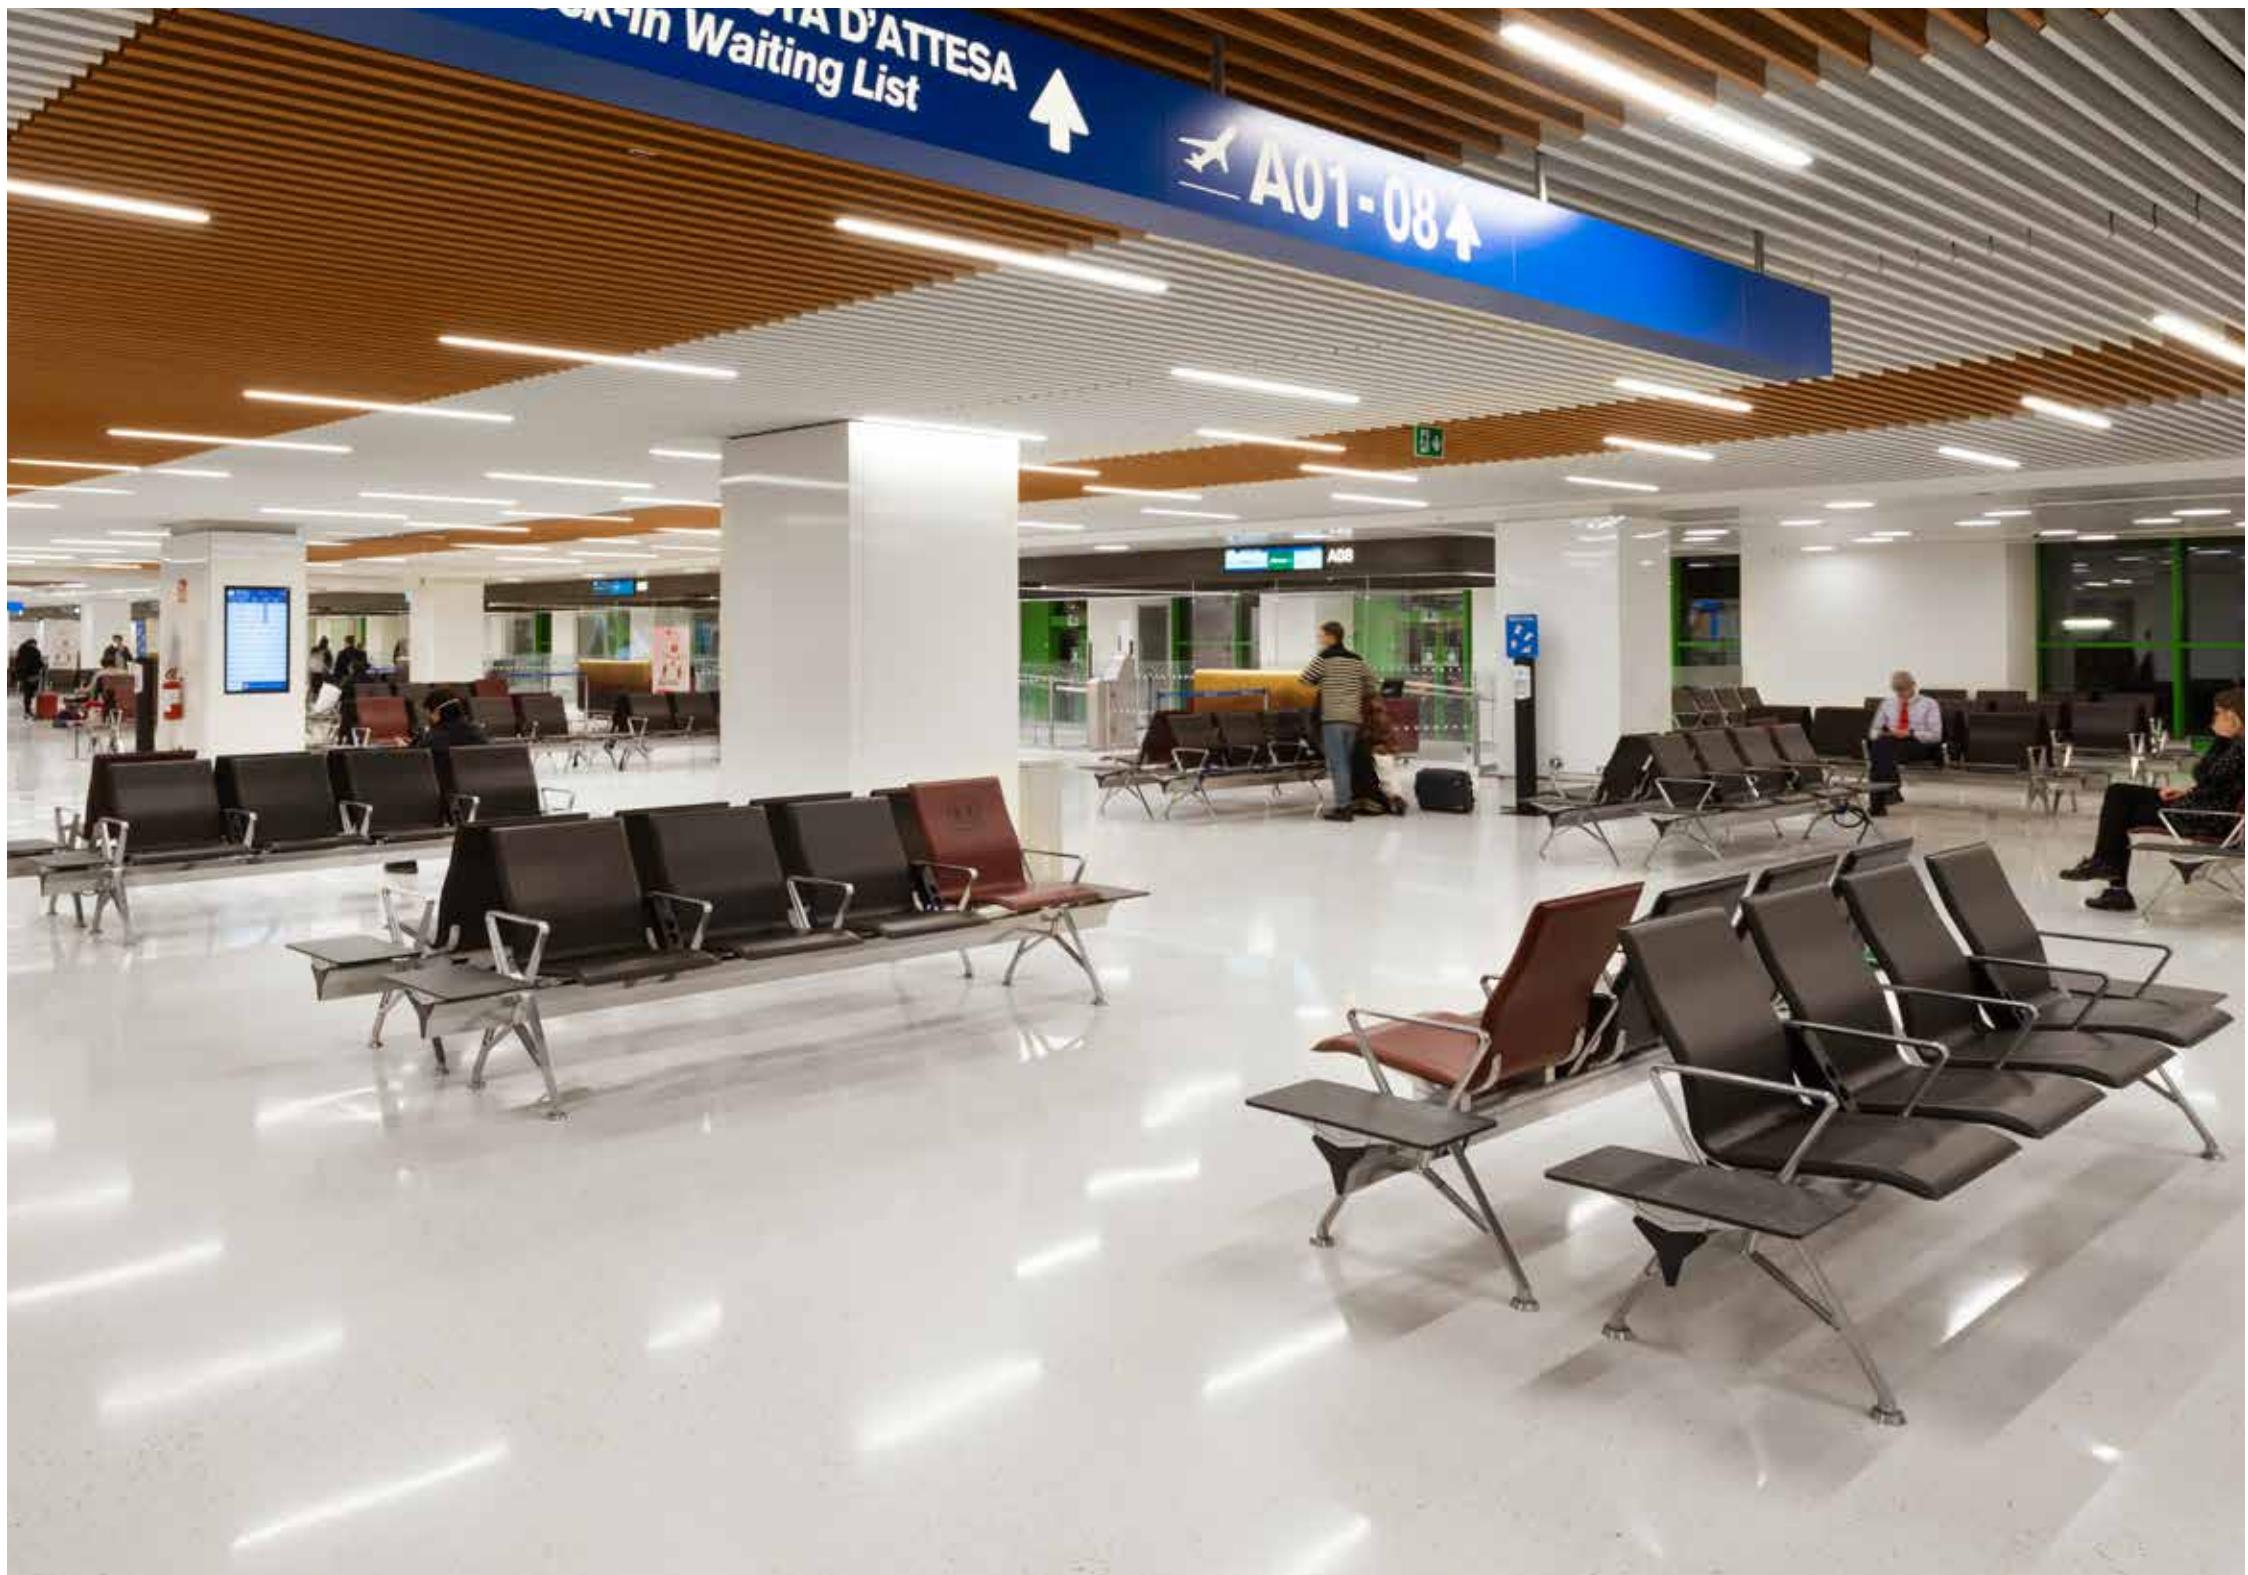

In powered benches, the wiring is routed along the inside of the structural beam to reach and power all seats. The socket module (with two power sockets and two USB or a single fast USB) can be positioned either between the seats or on the tables.

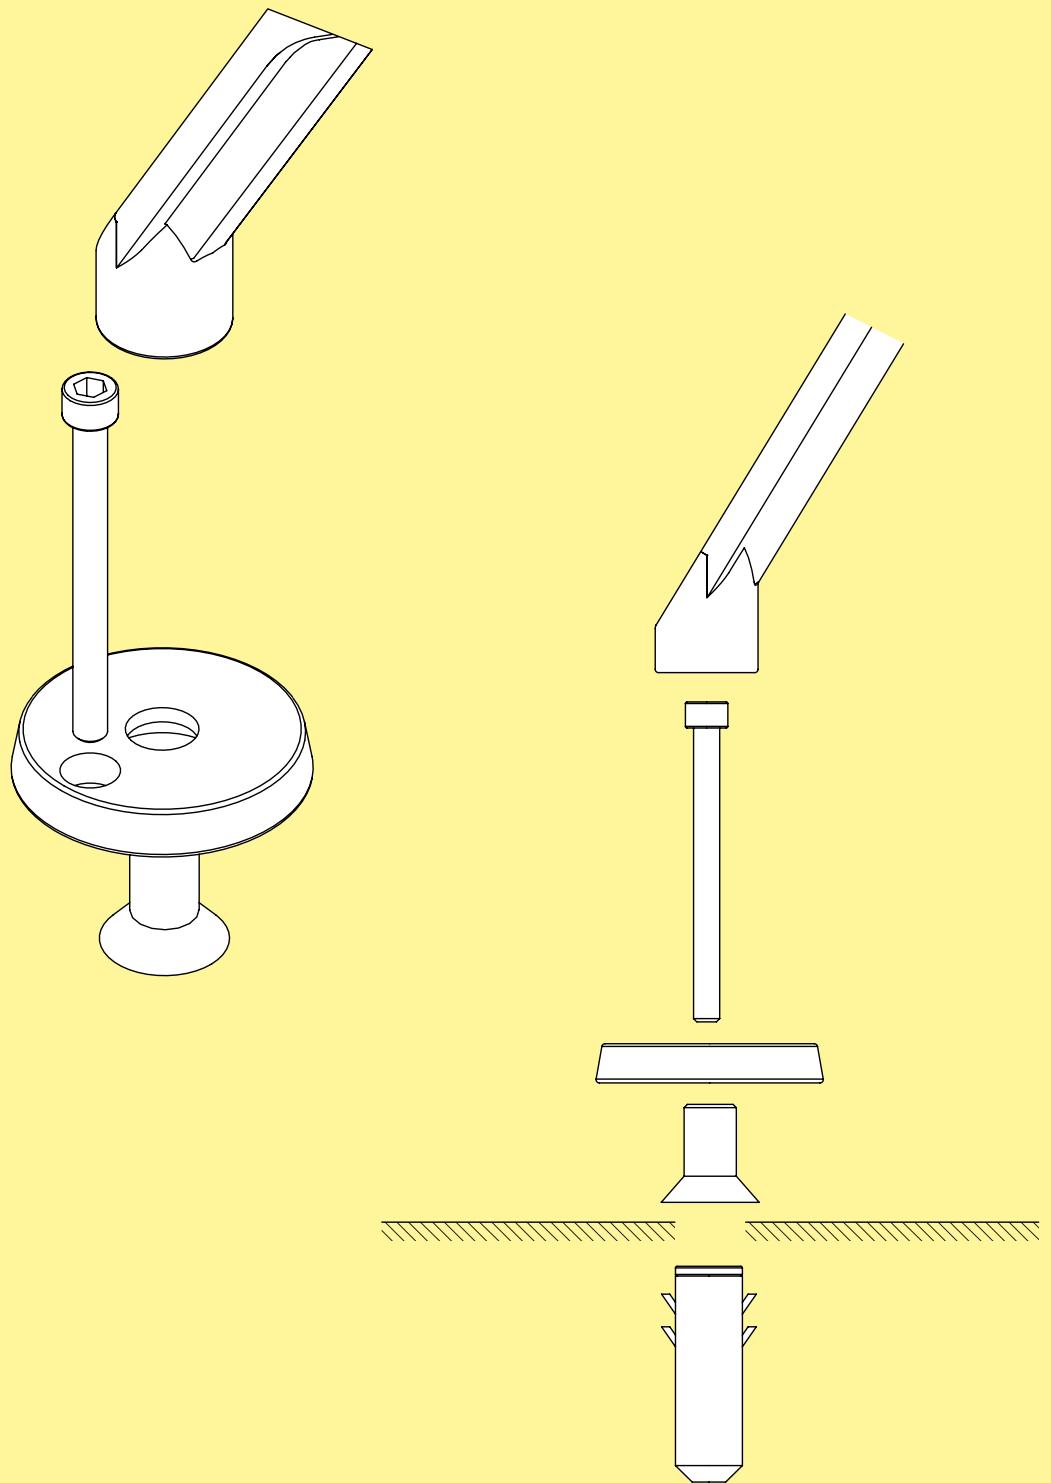

The cable routing along the leg down to the ground is concealed by the protective casing.

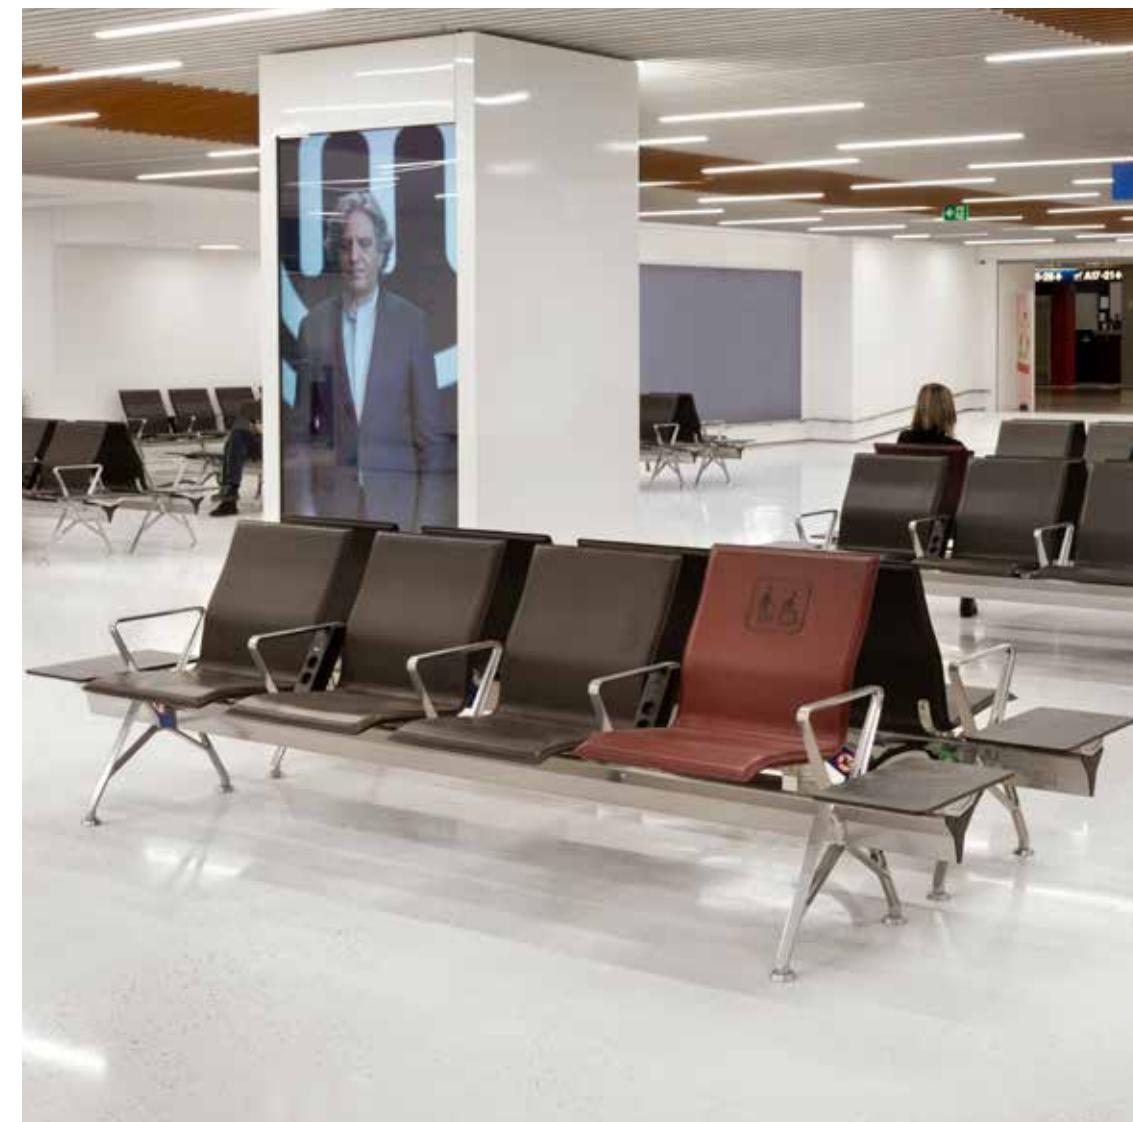

Nella panca predisposta per elettrificazione, il cablaggio scorre all'interno della barra strutturale così da raggiungere e servire tutte le sedute. Il modulo prese (a due prese corrente e due uscite USB o una fast USB) può essere posizionato sia tra le scocche che sui tavolini. Lo scorrimento del cavo lungo la gamba, fino a terra, è nascosto dal carter di protezione.

Aeris

RS

Design:
SNCF Agence des Gares & Jean-Marie Duthilleul
 1998

A modular system of individual seats which can be combined together either on a fixed base (column) or on a mobile base, designed to offer a vast range of configurations to satisfy any design requirements. The one or two beams structure welcomes from 2 to 5 seats, which are available in aluminium, wood, leather, self-skinning polyurethane, upholstered in fabric, or formed metal sheet. The RS series is made with aluminium castings/extrusions, treated for excellent robustness and strength, and is suited to installation both indoors and outdoors.

Un sistema modulare di sedute individuali aggregabili e componibili, con la possibilità di montare sia basi fisse (a colonna) che mobili, concepito per offrire la massima flessibilità di configurazione in base alle esigenze progettuali. Sulla stessa struttura, a una o due barre, possono essere montate da 2 a 5 scocche disponibili in alluminio, legno, cuoio, autopellante, rivestite in tessuto o in lamiera stampata. La serie RS è realizzata in fusione e/o estrusione di alluminio sottoposta a trattamenti che rendono il sistema robusto, resistente e adatto ad ambienti interni ed esterni.

London Bridge Station, London (UK), 2018

Along with the bench version with separate seats, the structure can assemble backless seats, fitted with armrests (on request), benches with wooden slats treated for outdoor usage, and standing rests for high passenger turnover areas.

Tables and armrests can be freely assembled along the modular beam frame: the tables are available in a variety of finishes or bespoke on client's request, while the armrests are made in cast aluminium, painted or polished on the outside. The modular nature of the RS system means it can be easily modified or upgraded even after the initial installation, and it is simple to manoeuvre and reinstate.

Oltre alla versione panca con scocca individuale, la declinazione offre la possibilità di montare sulla stessa struttura panchetti senza schienale dotati di braccioli a richiesta, panche a doghe in legno trattate per gli esterni o soluzioni di "seduta in piedi" utilizzate nelle aree di sosta più breve.

Tavolini e braccioli sono posizionabili liberamente sulla barra modulare: i tavolini sono disponibili in varie finiture o realizzabili su specifiche del cliente, mentre i braccioli sono realizzati in fusione di alluminio verniciato e lucidato a specchio nella parte esterna. Le componenti modulari di RS consentono di modificare o integrare il layout anche in tempi successivi alla prima installazione, semplificando la gestione e il reintegro del prodotto.

**RS**

RS2

Design:
SNCF Agence des Gares & Jean-Marie Duthilleul
2012

RS2 was created as a development of RS to permit the functionality required by the many electronic devices that passengers carry with them, offering electrical wiring and USB solutions built into the structure. Accessories like lamps, stools and free-standing tables, even with electric power sockets, complete the product range. RS2, ideal for both indoors and outdoors, becomes a fully fledged extension of the office, in answer to the increasing demand for waiting areas in which passengers can also work. Self-skiving polyurethane gives a highly pleasing effect and is also very robust. The ergonomic seat and backrest with lumbar support help the body assume a correct posture and ensure comfort even during long waits. The depth and height of the seats are designed to assist users with reduced mobility.

RS2

RS2 nasce dall'evoluzione di RS per accogliere la funzionalità richiesta dai molteplici strumenti elettronici che il passeggero porta con sé offrendo soluzioni di cablaggio elettrico e USB integrato alla struttura. Accessori quali lampade, sgabelli, tavoli free-standing elettrificabili completano la gamma di prodotto. RS2, adatta sia ad ambienti interni che esterni, diventa una vera e propria estensione dell'ufficio, in risposta alle esigenze di aree di attesa che spesso si trasformano in luoghi di lavoro temporaneo. L'uso dell'autopellante, una materia poliuretanica, dona gradevolezza estetica e grande resistenza. La forma ergonomica del sedile e lo schienale con sostegno lombare assecondando la forma del corpo assicurando il comfort anche nelle attese più lunghe. La profondità e l'altezza agevolano nell'utilizzo anche le persone a ridotta mobilità.

Lounges
Lounge

Frequent travelling turns the interiors of today's airports and railway stations into changing and hybrid spaces. They offer a new panorama of small, comfortable, multifunctional and connected lounges which welcome the passenger and turn waiting time into an opportunity to relax, meet other people, study and work.

I viaggi frequenti rendono oggi gli interni di stazioni e aeroporti spazi mutevoli e ibridi. Un panorama nuovo di piccoli salotti confortevoli, multifunzionali e connessi accolgono il viaggiatore trasformando i tempi di attesa in pause di relax, in opportunità di incontri e conversazioni, in momenti di studio o lavoro.

 2018

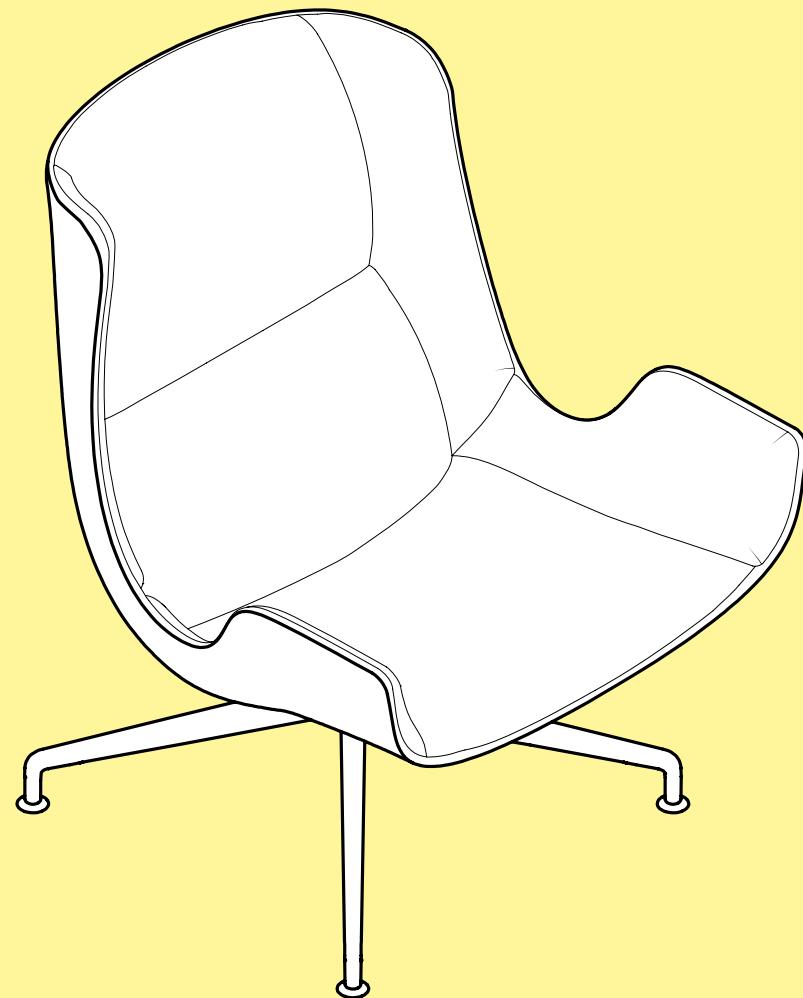

A chair that favours thinking and meditation.
In a modern-day society that is constantly connected and geared to sharing,
the enveloping shape of the shell helps to create a private space: favouring a feeling of privacy and aiding concentration in co-working spaces, lounges, open-space offices and home-office environment, as well as in community and public areas.

Una seduta che favorisce il pensiero e la meditazione. In una realtà sempre connessa e orientata alla condivisione, la forma avvolgente della scocca contribuisce a creare un'area di privacy, suggerendo una sensazione di riservatezza e favorendo la concentrazione all'interno degli spazi co-working, le lounge, gli uffici open space, le situazioni home-office, così come nei luoghi collettivi e negli ambienti pubblici.

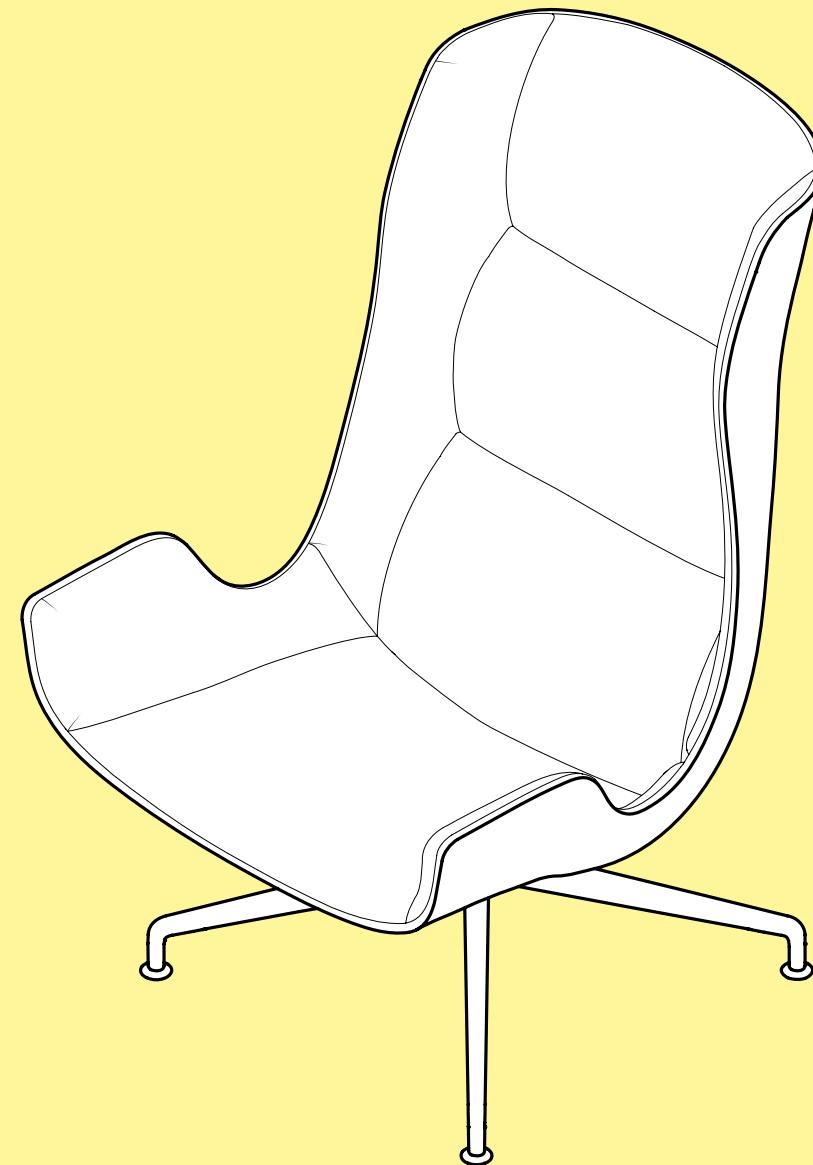

The chair welcomes its occupant with its carefully designed shape and ergonomic precision; the design expresses technical elegance and technologically advanced content in the choice of materials and production processes. The armchair, with painted die-cast aluminium base, comprises a mono-satin methacrylate monocoque shell, available in the dedicated colour palette as well as custom colours. The large cushion within the seat back, structured in zones with differentiated bearing capacity, was developed to ensure the maintenance of optimum user ergonomics, for maximum comfort.

Lo studio delle forme e la precisione ergonomica rendono la seduta confortevole e accogliente; il progetto esprime l'eleganza tecnica e i contenuti tecnologicamente avanzati attraverso la scelta dei materiali e dei processi produttivi. La poltrona, con base in pressofusione di alluminio verniciato, è costituita da una monoscocca in metacrilato monosatinato, disponibile nella palette cromatica dedicata o con colore a richiesta. L'ampio cuscino interno di rivestimento, strutturato in zone a portanza differenziata, è studiato per garantire il mantenimento della corretta linea ergonomica favorendo il massimo comfort della persona.

Its expertise is chosen by architects and contractors for managing works on a medium and large scale at an international level.

Tecno, attraverso le proprie sedi di Milano, Parigi, Londra, New York, Ingolstadt, Seul, Tokyo e Tunisi è leader nella realizzazione di progetti unici sia sotto il profilo estetico che per caratteristiche tecniche. La sua expertise è scelta da architetti e contractor per la gestione di cantieri di medie e grandi dimensioni a livello internazionale.

With a story that began in 1953, Tecno completes the culture of craftsmanship with industrial logic, knowledge of materials and innovation, bringing into being distinctive interior architecture and products that have become design icons, keeping its promise of quality and performance on every scale. Today, with a clear vision of the contemporary situation, Tecno implements the potential of digital and introduces smart, connected furnishings, the first to bring the Internet of Things to the world of the office.

Con una storia iniziata nel 1953, Tecno integra la cultura artigianale con le logiche industriali, la conoscenza dei materiali e l'innovazione dando vita ad architetture d'interni distintive e a prodotti diventati icone del design, mantenendo su ogni scala la promessa di qualità e performance. Oggi, con una lucida visione del contemporaneo, Tecno implementa le potenzialità del digitale e introduce arredi intelligenti e connessi, portando per prima l'Internet delle Cose nel mondo dell'ufficio.

Among its awards, Tecno has received five Compasso d'Oro ADI, one of which for "cultural quality expressed in product systems and in graphics".

Tra i riconoscimenti, Tecno ha ricevuto cinque Compassi d'Oro ADI, di cui uno per "la qualità culturale espressa nei sistemi di prodotto e nei segni grafici".

Just some of the special projects in which the company has been involved are the European Parliament in Brussels, Schiphol Airport in Amsterdam, the British Museum in London, the new Palais de Justice in Paris and offices such as the premises of Bulgari, Moleskine and the National Bank of Kuwait.

Interventi progettuali quali il Parlamento Europeo a Bruxelles, l'aeroporto di Schiphol ad Amsterdam, il British Museum a Londra, il nuovo Palazzo di Giustizia a Parigi e uffici come le sedi di Bulgari, Moleskine e National Bank of Kuwait, sono solo alcuni tra i progetti speciali realizzati dall'azienda.

Tecno is certified ISO 9001 and ISO 14001.
