T69

INTRO

The T69 and T102 series of tables appeared in 1963, the result of creative collaboration between Osvaldo Borsani and Eugenio Gerli. The design revisited some of the characteristic features of Tecno products: an intensive use of aluminium castings, a combination of shiny external surfaces with matt black structural parts, and, of course, rigorous, elegant and essential design.

A re-edition of the T69 table appeared in 2011, suitable for use in the home or in refined managerial offices. This table features a round top of 130 cm in diameter, made from 15 mm thick, tempered, clear glass. The glass top rests on a structure complete with soft and flexible plastic support discs.

The supporting structure consists of a central base in cast aluminium, finished in matt black paint, with a satin finished stainless steel trim profile around the outside.
